

Re-tension Instructions for GVT and GVA Blinds

With the material rolled up hold the blind in your left hand with the spring end pointing to the right.

Use the slotted Metal or Grey plastic tool provided in the packet of fitting to turn the spring clockwise I would try about 6-8 turns then fit the blind.

Check you have the correct tension and increase/ decrease as required.

Keep the tool safe in case you need to take the blind down from the window.
